SCOPE OF WORK**Introduction**

The Khidirpore Dock (KPD) is an impounded dock system where the basin water level is required to be maintained at 6.4 - 6.97 Mtr. above datum. To maintain the requisite basin water level, six no. Vickers make Vertical Fixed Pitch Single Stage Axial Flow Pumps (Recirculation pump) each having capacity of 47200 Gallons Per Minute(GPM) at total head of 15 Feet were installed during 1965-67 by M/s. Vickers Limited, UK for impounding water from river to basin and recirculation of water between lock barrel and dock basin. All these six sets, resting on separate foundations, have suction from the Lock Barrel along its Western wall with individual suction mouth at 29 feet below the quay level. All the six pumps have their outlets converging into a common delivery line to discharge water into the Dock Basin.

Motors of these pumps are powered by a High Tension supply fed through an electrical system comprising VCB Panel, VCU Panel, Auxiliary Panel, Capacitor, etc.

Function: For the sake of maintaining the water-level of the dock-basin generally at 3 feet below quay level against loss of basin water during opening of Lock Gates for vessel movement and leakage in the lock gates, the Pumps (Recirculation pumps) are required to be operated on daily basis. Normally two pumps are operated simultaneously.
